CANTOR COLBURN, LLP			LEE, SIN J	
20 Church Street				
22nd Floor			ART UNIT	PAPER NUMBER
Hartford, CT 06103			1795	
NOTIFICATION DATE		DELIVERY MODE		
02/05/2009		ELECTRONIC		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

usptopatentmail@cantorcolburn.com

1. Present claims 1, 2 and 6-15 stand rejected under 35 U.S.C. 103(a) over Hwang et al (Polymer (2000) in view of Pavelcheck et al'689 for the reasons explained in Paragraph 5 of the last Final Office action mailed on August 19, 2008.

Response to Arguments

2. Applicants argue that none of the cited references teach or suggest the efficacy of the compound of formula 1 as adhesivity enhancing agent.

However, since Hwang teaches the use of polyvinyl phenol of present Chemical Formula 1 in his composition, it is irrelevant whether Hwang calls the compound as UV absorber or as an adhesivity enhancer. That is, since Hwang teaches polyvinyl phenol of present Chemical Formula 1, the compound would inherently be capable of enhancing adhesivity (that is, Hwang's compound inherently teaches present adhesivity enhancer).

Applicants also argue that present composition would not have been obvious in view of the showing of unexpected or superior results. Applicants argue that the present composition containing the claimed adhesivity enhancer provided for unexpected improved or superior properties.

The comparison shown in Table 1 is trying to show unexpectedly superior results of using the adhesivity enhancer of Chemical Formula 1. However, Hwang ***already teaches*** the use of the compound of present Chemical Formula 1 (even if he calls it a UV absorber). The Office action is stating that it would have been obvious to add Pavelchek's *light absorbing agent* in Hwang's composition in order to absorb reflections in the deep UV range as taught by Pavelcheck. Thus, the comparison of Table 1 (which is trying to show the unexpectedly superior results of using adhesivity enhancer) is not

helpful in showing unexpectedly superior results of present invention over that of Hwang in view of Pavelcheck. *Besides*, as previously indicated, there is huge discrepancy in amounts of the crosslinking agent between Examples and Comparative Examples, and thus, the comparison is not found to be valid because in order to successfully show unexpected superior results of adding an adhesivity enhancer, other components used in examples and comparative examples should be the same in kinds and amounts.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sin J. Lee whose telephone number is 571-272-1333. The examiner can normally be reached on Monday-Friday from 9:00 am EST to 5:30 pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cynthia Kelly, can be reached on 571-272-1526. The fax phone number for the organization where this application or proceeding is assigned is **571-273-8300**.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
